From the Alabama Planter.

How to Grow Asparagus. Among all the productions of the garden, I know of none more abused or cultivated with so little regard to horticultural skill and the true principles of vegetable physiology. One of the most delicious and wholesome vegetables, when arrived at the surface, and it becomes tough and court in the premises. almost woody-and the only part that can poslowed to rise an inch above the ground, when it is cut four or five inches above the surface.

toms, I take the liberty to suggest to all who are Issued July 1st, 1853. fond of good asparagus, to change the practice at once. Make a good bed, well dug and manured, if trenched two feet deep the better, but have it well drained. In planting, never place the crown or top of the roots more than two inches below the surface, and keep them always trator of Peter Ruppert deceased, present my an- Fine Black Cloth, long and short, about that depth, except in winter, when a good nual account for settlement and allowance. coat of manage will shield and protect the plants -this may be torked early in the spring; and during spring and summer the bed should, of course, be kept mellow and free from weeds. Early in spring, when the rank stalks have shot up four or five inches above ground and acquired a greenish hue from the atmosphere and light, then cut them even with the surface; never cut below, as it would endanger the rising shootsand you will have a dish of the most exquisite delicacy. No tough, stringy, and wooden stumps will be left upon your plate after the repast.

If you have beds already planted in the old way, go to work early this spring, and with the Imperial, Gunpowder, Young Hyson, Powhoe scrape off carefully all the earth down to the roots, then loosen with a fork or other instrument the ground between the plants, and throw Rio, Havana, Jamaca, Lagupra, Choice Old All kinds and qualities of shirts for men and bor back fine dirt enough to again cover the tops of the roots about two inches, and cut and manage the asparagus as above directed. If at all skep- Louisiana, Havana, New York and New Or- White, Silk, Flannel, Merino and Canton flannel tical, try the experiment on a part of your bed, and I guarantee you will be satisfied with the

FRUIT TREES .- If fruit dwindles in size, and becomes defective, and knotty, a scientific farmer knows that the earth needs phosphate of lime; one of the most necessary ingredients to a full and perfect development of fruit.

The scientific farmer would then gather leaves, and burn, or pulverize them, and after digging | Herrings, in barrels and half barrels. round his tree so as to expose the roots, put half SALMON, in kitts and half kitts. a bushel of bone dust, leaves and leached ashes mixed in equal portions to each tree, and thus afford the material for a perfect development of Castor, Lard, Linseed, Whale, Sperm, Tan-

· If peach trees dwindle, the leaves crisp, and curl up, or in other words have the yellows, they Mess and Prime Pork, Mess Beef in bbls. and need iron, A man may as well live without breath, as a peach tree without iron. If the must, or be disappointed in his hope of fruit. western, Beans, Potatoes, Onions, coarse, fine, porte monnias, dressing cases cigar cases, Roger's In such case go to the smith shop, or machine table and rice Salt. shop, and get the scales, or what is better, the iron turnings, and after digging away, round the roots, so as to expose them, apply one quart of scoriæ, or scales, or turnings, to each tree, a pint of salt, and a peck of leached ashes, and the curled leaves will give place to delicious fruit.

The yellows in the peach tree, is the same as the yellow water in the horse; both arise from a want of iron. Infuse that into the system, to act as a receiver of electricity, and the yellow water in a horse, and the yellows in the peach Writing, Wrapping, Plaving Cards, in great tree are matters of history .- Ohio Farmer.
